

PREVENT CHEATING During Online Exams

“ With LockDown Browser and Respondus Monitor, I have peace of mind that the right person is taking the test. It works exceptionally well with our LMS, and gives me the flexibility and control I need for online tests.”

- Derrick Griffey, Gadsden State Community College

LockDown Browser®

LockDown Browser is a custom browser that locks down a computer or iPad to prevent cheating during online exams. It's ideal for use in **proctored environments**.

- Prevents access to other applications and websites during an exam
- Exam content cannot be copied or printed
- Students are locked into the exam until it is submitted for grading

Respondus Monitor®

Respondus Monitor is a companion product to LockDown Browser. It adds webcam and video technology to deter cheating and ensure student identity in **non-proctored environments**.

- Students use their own computer and webcam
- The student and the surrounding environment are recorded during the exam
- Instructors can quickly review data and video from the exam session, including automated flagging of suspicious behaviors

Get Started Today

Easy to Use: The instructor settings appear within the online course. Simply choose the setting that requires the use of LockDown Browser for an exam. If the exam can be taken in a non-proctored setting, add the webcam setting.

Flexible: Instructors can give students the choice of taking the exam from home or work using Respondus Monitor, or going to a proctored setting where only LockDown Browser is required. Students love the flexibility.

Convenient: Students don't need to schedule exams in advance when using Respondus Monitor. The system is available 24/7.

Try for Free: With your LockDown Browser license, your institution has access to 200 free seats of Respondus Monitor annually. Contact your administrator to learn how to take advantage of these.
